## EROSION & SEDIMENT CONTROL PLAN REVIEW SUBMISSION REQUIREMENTS

In order to expedite the review of Erosion & Sediment Control Plan Review Applications, please be sure that all of the following items have been included in your Erosion & Sediment Control Plan Review Application. Please return this completed checklist with the application to ensure that all items have been addressed.

- Completed Erosion & Sediment Control Plan Review Application.
- A Responsible Land Disturber (RLD) Certification Statement
- Erosion & Sediment Control Plan Review Application Review Fee:
  - \$100 – < 1.0 Acre
  - \$150 – 1.0 - < 10.0 Acre
  - \$200 – 10.0 - < 50.0 Acre
  - \$300 – 50.0 - < 100.0 Acre
  - \$500 – 100.0 + Acre
- An erosion and sediment control plan that shows all of the following information (if applicable):
  - a. A boundary survey of the property, including easements, water bodies, parcel numbers, street names, route numbers, adjacent properties and other landmarks.
  - b. The location of all Chesapeake Bay Preservation Act features, including the Resource Protection Area (RPA) and Resource Management Area (RMA).
  - c. The limits of clearing and grading on the site.
  - d. The existing contours of the site.
  - e. The changes to the existing contours, including the final drainage patterns.
  - f. The location of all existing tree lines, grassed areas, or unique vegetation.
  - g. The location of any areas with potentially serious erosion problems.
  - h. The location of all proposed site improvements, including (but not limited to) buildings, parking areas, access roads and utility construction.
  - i. The location of all proposed erosion and sediment controls and stormwater management practices located on site. Standards symbols and abbreviations found in Chapter 3 of the Virginia Erosion and Sediment Control Handbook (1992 edition) shall be used. Any structural practices used that are not referenced to the Handbook should be explained and illustrated with detailed drawings.
  - j. The location of any off-site land disturbance activities (i.e. borrow sites, waste areas, etc.).
  - k. E&S Quantity List for Bond Calculation
  - l. Provide a copy of the Run-off Reduction Calculation Spreadsheet

An erosion and sediment control bond, in an amount determined by the Planning Department, will also be required prior to the commencement of land disturbance activities.

The erosion and sediment control plan will have to be designed by a licensed architect, engineer or surveyor if (a) major site plan or major subdivision review is required for the final proposed use for the site, (b) temporary sediment traps and basins are proposed at the site, (c) environmentally sensitive areas, most notably wetlands, will be impacted by the proposed land disturbance, (d) data to satisfy Minimum Standard 19 is required, or (e) deemed appropriate by the Planning Department based on the size and impact of the disturbance.

---

### CERTIFICATION:

I hereby certify that the attached plans and this completed application form contain all the required information for an Erosion & Sediment Control Plan Review in accordance with the Middlesex County Erosion and Sediment Control Ordinance and the Virginia Erosion and Sediment Control Handbook (1992 edition). I understand that the submission of incomplete or inaccurate information may delay the processing of this Application.

# LAND DISTURBANCE PERMIT MINIMUM STANDARDS

As mandated by Section 4VAC50-30-40 of the State erosion and sediment control regulations, all land disturbing activities must meet the following nineteen minimum standards (as applicable):

- 1. Soil Stabilization:**
  - Permanent or temporary soil stabilization shall be applied to denuded areas within seven (7) days after final grade is reached on any portion of the site.
  - Temporary soil stabilization shall be applied within seven days to denuded areas that may not be at final grade but will remain dormant for longer than 30 days, but less than one year.
  - Permanent stabilization shall be applied to areas that are to be left dormant for more than one year.
- 2. Soil Stockpile Stabilization:**
  - During construction, soil stockpiles and borrow areas shall be stabilized or protected with sediment trapping measures. Temporary protection and permanent stabilization shall be applied to all soil stockpiles on site and borrow areas or soil intentionally transferred off site.
- 3. Permanent Stabilization:**
  - Permanent vegetative cover shall be established on denuded areas not otherwise permanently stabilized. Permanent vegetation shall not be considered established until a ground cover is achieved that is uniform, mature enough to survive, and will inhibit erosion.
- 4. Sediment Basins & Traps:**
  - Sediment basins, sediment traps, perimeter dikes, sediment barriers, and other measures intended to trap sediment shall be constructed as a first step in any land-disturbing activity and shall be made functional before upslope land disturbance takes place.
- 5. Stabilization of Earthen Structures:**
  - Stabilization measures shall be applied to earthen structures such as dams, dikes, and diversions immediately after installation.
- 6. Sediment Traps & Sediment Basins:**
  - Sediment traps shall be designed and constructed based upon the total drainage area to be served by the trap or basin as follows:
    - Only control drainage areas less than three acres.
    - Minimum storage capacity of 134 cubic yards per acre of drainage area.
  - Sediment basins shall be designed and constructed based upon the total drainage area to be served by the trap or basin as follows:
    - Control drainage areas greater than or equal to three acres.
    - Minimum storage capacity of 134 cubic yards per acre of drainage area.
    - The outfall system shall, at a minimum, maintain the structural integrity of the basin during a twenty-five year storm of 24-hour duration.
- 7. Cut and Fill Slopes Design & Construction:**
  - Cut and fill slopes shall be designed and constructed in a manner that will minimize erosion. Slopes found to be eroding excessively within one year of permanent stabilization shall be provided with additional slope stabilizing measures until the problem is corrected.
- 8. Concentrated Runoff Down Slopes:**
  - Concentrated runoff shall not flow down cut or fill slopes unless contained within an adequate temporary or permanent channel, flume, or slope drain structure.

9. **Slope Maintenance:**
- Whenever water seeps from a slope face, adequate drainage or other protection shall be provided.
10. **Storm Sewer Inlet Protection:**
- All storm sewer inlets made operable during construction shall be protected so that sediment-laden water cannot enter the stormwater conveyance system without first being filtered/treated to remove sediment.
11. **Stormwater Conveyance Protection:**
- Before newly constructed stormwater conveyance channels or pipes are made operational, adequate outlet protection and any required temporary or permanent channel lining shall be installed in both the conveyance channel and the receiving channel.
12. **Work in Live Watercourse:**
- When work in a live watercourse is performed:
    - Precautions shall be taken to minimize encroachment, control sediment transport, and stabilize the work area to the greatest extent possible during construction.
    - Non-erodible material shall be used for the construction of causeways and cofferdams.
    - Earthen fill may be used for these structures if armored by non-erodible cover materials.
13. **Crossing Live Watercourse:**
- When a live watercourse must be crossed by construction vehicles more than twice in any six-month period, a temporary vehicular stream crossing constructed of nonerodible material shall be provided.
14. **Regulation of Watercourse Crossing:**
- All applicable federal, state and local regulations pertaining to working in or crossing live watercourses shall be met.
15. **Stabilization of Watercourse:**
- The bed and banks of a watercourse shall be stabilized immediately after work in the watercourse is completed.
16. **Underground Utility Line Installation:**
- Underground utility lines shall be installed in accordance with the following standards in addition to other applicable criteria:
    - No more than 500 linear feet of trench may be opened at one time.
    - Excavated material shall be placed on the uphill side of trenches.
    - Effluent from dewatering operations shall be filtered or passed through an approved sediment trapping device, or both, and discharged in a manner that does not adversely affect flowing streams or off-site property.
    - Material used for backfilling trenches shall be properly compacted in order to minimize erosion and promote stabilization.
    - Restabilization shall be accomplished in accordance with these regulations.
    - Comply with applicable safety regulations.
17. **Vehicular Sediment Tracking:**
- Where construction vehicle access routes intersect paved or public roads:
    - Provisions shall be made to minimize the transport of sediment by vehicular tracking onto the paved surface.
    - Where sediment is transported onto a paved or public road surface, the road surface shall be cleaned thoroughly at the end of each day.
    - Sediment shall be removed from the roads by shoveling or sweeping and transported to a sediment control disposal area. Street washing shall be allowed only after sediment is removed in this manner.

**18. Removal of Temporary Measures:**

- All temporary erosion and sediment control measures shall be removed within 30 days after final site stabilization or after the temporary measures are no longer needed, unless otherwise authorized by the program authority. Trapped sediment and the disturbed soil areas resulting from the disposition of temporary measures shall be permanently stabilized to prevent further erosion and sedimentation.

**19. Stormwater Management:**

- Properties and waterways downstream from development sites shall be protected from sediment deposition, erosion, and damage due to increases in volume, velocity, and peak flow rate of stormwater runoff for the stated frequency storm of 24-hour duration in accordance with the Standards & Criteria established in 9VAC25-840-40 Minimum Standards MS 19.
- For Land Disturbance less than 1.0 Acre, a certification shall be included on the plan, by the licensed plan prepared, stating that the Plan meets the minimum requirements established in the above code section. If the total Land Disturbance exceeds 1.0 Acre, the applicant shall submit the plan to the Virginia Department of Environmental Quality for Review of Stormwater Management.

## CONDITIONS

1. No Land Disturbance shall commence until a Land Disturbance Permit has been obtained.
2. The County is granted right-of-entry for inspections of erosion and sediment control measures and to record inspections in writing, photographs, and video tape, in conjunction with Plan Review
